**Vibers inside**

Vibers develops advanced technology and materials with local Elephant grass fibres; the 100% natural miracle crop.

Vibers bio-concrete is available as a mix for outdoor applications in the public space like street furniture, tiles, architectural designs and bases for various uses.

Vibers bio-concrete is available as mix for ultra-lightweight applications in building & construction like (acoustic) panels and sound walls.

Vibers bio-concrete is piloting a mix for 3D printing for indoor applications.

## Benefits of our mix for applications in the public space

- Low ecological footprint
- High quality & durable
- Light weight
- Frost & weather resistant
- Made in Holland

## Benefits of our mix for ultra-lightweight bio-concrete

- Low ecological footprint
- Ultra lightweight & ultra low density
- High sound absorption
- Good thermal insulation
- High quality & good strength
- Natural look & feel

## Benefits of our mix for 3D printing

- Low ecological footprint
- High early strength & good elastic properties
- Balanced flow, hardening and adhesion properties
- White, marble like appearance

## Where to buy our products

You can order Vibers bio-concrete directly from Vibers. Please contact us for options and prices. We are always happy to help.

Next to bio-concrete we also offer Vibers paper & cardboard and Vibers bioplastic.

Your product deserves Vibers. Let's change the world together.
